

With any medical test it is important that external factors do not interfere with your test result. Please read and follow these instructions carefully.

For fertility studies it is essential that your specimen be collected under controlled conditions, and **delivered within one hour of collection** to an SA Pathology **laboratory** (not a Patient Centre).

Before the test

- Obtain a sterile container from your doctor or an SA Pathology Patient Centre.
- Fertility Testing – abstinence from ejaculation is required for 2-7 days.
- For other semen analysis tests, abstinence is not required.

Collecting the specimen

1. The specimen is obtained by masturbation into the sterile container provided.
 - *do not* use other containers, lubricants or a condom, they may contain chemicals which can affect the test result
2. Collect the complete ejaculate
 - if the sample is incomplete write a note on the container or Request Form e.g. partial sample only.
3. Write the following details on the collection container
 - your given name and surname
 - date of birth
 - the time and date of sample collection.

Delivering the specimen

Keep the specimen at body temperature.
e.g. keep it close to your body, put it in your inside jacket or shirt pocket.

Fertility Studies

Deliver to your nearest SA Pathology laboratory (*not a Patient Centre*), **within one hour of collection** for urgent processing. (See overleaf for SA Pathology laboratory locations and delivery times).

Post-vasectomy

Deliver to your nearest SA Pathology laboratory or Patient Centre.

PATIENT TO COMPLETE - this section MUST accompany the specimen.

Patient Surname _____ Given Name _____

Date of Birth ____ / ____ / ____

Post Vasectomy Fertility Testing

Date of collection ____ / ____ / ____

Time of collection _____ am/pm

Sample collected Full Partial

Number of days of ejaculatory abstinence _____

Lubricant used? Yes No

Were you able to keep the sample warm (e.g. in your jacket/shirt pocket)? Yes No
