

With any medical test it is important that other factors do not interfere with your test result. Please read and follow these instructions carefully.

Preparation

- You must fast for 9 hours before your test, This means no food. You may have plain water up to 1 hour prior to the test.

What to bring

It is essential that you bring with you:

- a list of all current medications and dosages
- your Medicare Card

Collection Procedure

- You will be required to swallow a capsule with approximately 80mL of water.
- 15 minutes later you will be guided through the collection process which will involve you blowing into a straw.

Medication

The drugs listed below are currently used in association with *H. pylori* eradication. Some drugs will affect the result of your Urea Breath Test so you must stop taking them as indicated below before your test.

Eradication Regimes – 4 weeks before

You must **stop taking** the following drugs and all antibiotics or antibacterials, whether taken as part of *H. pylori* eradication therapy or for any other reason, at least four (4) weeks before your test.

Nexium HP7, Klacid HP7

Proton Pump Inhibitors – 7 days before

You must **stop taking** any Proton Pump Inhibitors at least seven (7) days before your test even if they are part of *H. pylori* eradication therapy. Examples include:

Omeprazole (*Losec, Acimax etc*), Lansoprazole (*Zoton etc*), Pantoprazole (*Somac etc*), Esomeprazole (*Nexium etc*), Rabeprazole (*Pariet etc*)

H2 Receptor Antagonists – 9 hours before

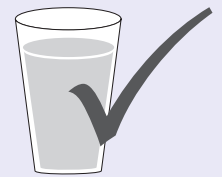

You must **stop taking** any H2 Receptor Antagonists at least nine (9) hours before your test. Examples include:

Cimetidine (*Magicul etc*), Ranitidine (*Zantac etc*), Famotidine (*Pepcid, Pepcidine etc*), Nizatidine (*Tazac etc*)

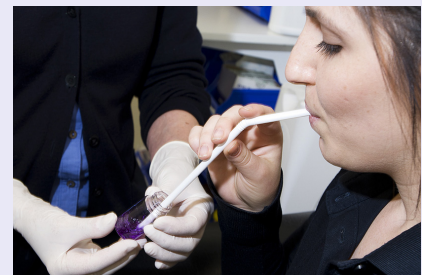

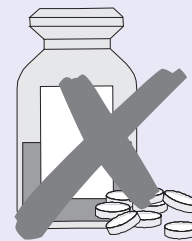

Antacids – stop when fasting

Antacids, Mylanta and Gaviscon can be taken the day before your test, but not after you have begun to fast.

9 hours

Plain water is OK
